

#30DaysOfCode | Backend Track

Day 16

Auth Auth

Using ExpressJs or the native Http module, write a server that takes in username, email and password from a SIGNUP route to create a user, and has a LOGIN route to authenticate the user using the password and the email or username. Enjoy :-)

>> Remember to encrypt and compare the password with bcrypt but don't return it in any responses...

Input Format

Input Type: [POST]https://anyserver/signup

Example:

```
> {  
  "email": "david@aol.com"  
  "username": "kingdavid"  
  "password": "shhh"  
}
```

Output Format

Output Type: [POST]https://anyserver/login

Example:

```
> {  
  "email": "david@aol.com"  
  "password": "shhh"  
}
```
