

#30DaysOfCode | Backend Track

Day 19

Rest Motion

By now you have implemented the “**createuser**” and “**getuser**” routes with MongoDB to store data. Implement routes to fetch all users, update and delete users using the appropriate HTTP methods and Mongoose methods.

>> All requests and responses in JSON.

>> Refer to Google, Youtube, StackOverflow and MongoDB and Mongoose Docs for help.

Request Format

Path: [PUT]https://anyserver/updateuser

Example:

Body:

```
> {  
  "email": "john@aol.com"  
}
```

Response Format

Path: [PUT]]https://anyserver/getuser

Example:

```
> {  
  "_id": sampleobjectId,  
  "email": "john@aol.com",  
  "username": "david",  
  "date": "09-04-2020"  
  "time": "12:22pm"  
}
```
