#30DaysOfCode | Backend Track

Day 21

Server Logger

Using Morgan or any other request logging middleware package. Log all requests that your server gets. This log can be stored in a log text file or in the db and it will contain the HTTP method, the path requested, the response status code and the time taken to send a response in ms. The logs should be available through a GET request to a "/logs" route in text format and **Not JSON**.

>> All requests and responses in JSON.

>> Refer to Google, Youtube, StackOverflow and Npm for help.

>> This route should be unprotected.

>> Password is not returned in any response.

Request Format

Path: [GET]https://anyserver/*logs*

Example:

Response Format

Path: [GET]]https://anyserver/logs

Example:

> {

GET /anyserver/logs 200 13.851 ms

GET /anyserver/otherrequest 200 10.825 ms

GET /anyserver/otherrequest 200 4.683 ms

GET /anyserver/otherrequest 200 8.704 ms

GET /anyserver/logs 200 6.278 ms

}
