#30DaysOfCode | Backend Track

Day 14

Drome Server

Using ExpressJs or the native Http module, write a server that takes in an array of words from a POST request and returns only the words that are palindromes as a response from a GET request.

Input Format

Input Type: [POST]https://anyserver/createdata

Example:

> {

    "words": ["backend", "madam"]

}

Output Format

Output Type: [GET]https://anyserver/getdata

Example:

> {

    "words": ["madam"]

}
