30 DAYS OF CODE (PYTHON TRACK)

<u>Day 13 -Text Wrap</u>

Create a function named **wrapper** that **takes in a paragraph and the maximum number of characters per line as parameters** and **returns the wrapped text.**

If 'The family of two\nwent out to play.' is to be wrapped to 10 characters per line, we would have: 'The family\nof two\nwent out t\no play.'

Note: Blank spaces are also characters.

N.B: No in-built module should be used.
