#30DaysOfCode | Backend Track

Day 13

Express Roads

Using ExpressJS or the native Http module, write a server that takes in JSON data from a POST request and returns that same data as a response from a GET request on another route, data should be sent in the request body.

Input Format

Input Type: [POST]https://anyserver/createdata

Example:

> {

    "track": "backend"

}

Output Format

Output Type: [GET]https://anyserver/getdata

Example:

> {

    "track": "backend

}
